

Who Do I belong to?

Birds have feet of different shapes and sizes to adapt to their environment or the way they live.

Identify these feet and match them to their functions.

| | | | | | |
|---------------|---|---|---|---|---|
| Domestic fowl | • | • |  | • | <ul style="list-style-type: none"> • Sharp, curved claw for catching and holding prey |
| Ostrich | • | • |  | • | <ul style="list-style-type: none"> • Strong feet with claws to dig for worms, grains and seeds |
| Parrot | • | • |  | • | <ul style="list-style-type: none"> • Webbed toes for swimming and walking on mud |
| Eagle | • | • |  | • | <ul style="list-style-type: none"> • For grasping branches and holding nuts and other food items |
| Duck | • | • |  | • | <ul style="list-style-type: none"> • Strong, sturdy feet to run fast, toes to dig for food |
